

OMNIDE

Architecture

Planning

Interior Design

We are architects, thinkers, and creators.

PROCESS

We deliver the best design solutions by developing ideas, taking into consideration existing historical layers and the peculiarity of the contest we are working on.

We have a design sensibility and a selective process that allows the client to gain understanding of the project, its costs and time of delivery. The client becomes an integrated part of the process with a clear idea and understanding of the final product.

From inception to completion, we follow four steps to ensure that a clear goal is set and that our projects are delivered as envisioned by the client and ourselves.

STRATEGY

Understanding of the requirements and planning the development of the project.

DESIGN

Presenting proposals which will deliver quality and create revenues.

PLANNING

Dealing with local authorities' requirements.

PROJECT MANAGEMENT

Managing construction and delivery of project within time, budget and as per design specifications.

OMNIDE is an architectural design studio seeking to address the rising demand of high-end quality design.

We are architects, designers, builders and thinkers operating within the fields of architecture, urbanism, research and development and have an open approach towards constructive and multidisciplinary collaboration that enables successful delivery of projects.

OMNIDE was funded by two partners in 2013 in London.

We approach every project with quality and individuality; we are also driven by the combined and diverse experience of our experienced partners located in Amsterdam, Mumbai, Nairobi and Rome.

Over the years, Omnide has developed extensive experience in the residential, retail and commercial fields ranging from new builds to refurbishments and conversions both in the UK and around the world.

VALUES

Every project is a journey where we seek a balance between aesthetics and function through spaces, textures, light and the individual's personality and needs.

Our architecture emerges from an analysis of how human life evolves and changes. It is driven by the influence of multicultural exchanges, global economical flows and inventive communication technologies, we seek new ways of architectural and urban organisation. We believe that in order to deal with today's challenges, architecture needs to explore new horizons and possibilities.

Each of our designs sees to provide an efficient bespoke solution with consideration of all details and variables involved. We are passionate about delivering modern and contemporary spaces that highlight the invaluable characteristics of an existing space while fusing them with new interior and contemporary finishes. We promote the use of natural materials over synthetic and local materials with global influences.

Ground Floor Extension & back yard garden designs

Ground Floor Plan

First Floor Plan

Section

SUSTAINABLE

Ravenscourt House is a Building of Merit, located in Hammersmith, West London. It is created by combining two apartments into one single home to accommodate four bedrooms and a 40 m² extension towards the garden. Ravenscourt House was designed around a young family with two children. The client envisioned a playful and innovative home with a huge living space for children and parents to enjoy time together. We took care of every single detail of the house from inception to completion extending the house on the first floor and rear garden.

BESPOKE STAIRCASE

NATURAL

It was essential for us that the juxtaposition between the new and the old would be readable. We wanted our contemporary design to highlight the existing and also the new extension. Since the property is a Building of Merit, we made a conscious decision to showcase and appreciate the nature of the building. We exposed existing textures such as the original bricks and concrete walls, thus creating contrast with the new materials such as the beams in the living space which have been exposed, again to show all materials in their most natural state.

CRANLEY GARDENS

High end renovation for a Grade II listed building

Year: 2022	Location: Cranley Gardens, London
Type: Residential Grade II listed building	Status: Completed
Client: Private	Contractor: Ilariacastagna
Size: 120 m ²	Omnide Role: Architect & Project management

Situated in London Sw7, Cranley Gardens flat is one of the latest residential projects as a listed grade II building we completed with the collaboration of *ilariacastagna* and *belgraviaprestige*

As architects we were asked to make sure the client intention would have been approved and progressed to construction.

Modernising the property entailed a good selection of materials, furniture and details creating a great harmony to period details of the flat. The result is a contemporary and functional look for this property

THE USE OF LIGHT

Omnide dismissed the boundary between living room, office, diningroom and kitchen to create an open space that can make all of these functional space under the natural sunlight.

Floor Plan

Section AA

Section BB

NATURAL

The materiality choosing for the interior Omnide chose the wooden floor and chosed to expose the beam and the brick facade which keeps the building's own characteristic and the renovation makes it have temporary and more leisure for the residents.

The furniture choosing of the merchant court 33 more approach the modern aesthetic and a sustainable lifestyle principle. The whole flat's furniture is decent and stylish.

DALEHAM MEWS

Ground Floor

Basement

96 Belsize Lane is a two floors, 100m2 office space conceived as a laboratory where Art, Design and Architecture live together.

We designed a space to convert an existing accountant space into an architect office but with the possibility to involve the local community to visit the office during events, talk and exhibitions. This to uplift the social life of the street and to create interest from people in arts and design.

The new workspace brings together the finest products from a selection of skilled craftsmen to create a space made of a mix of different finishes, such as marble, wood, cement, steel. Unique elements characterize each space and every single component of Belsize Lane project was specifically designed by Omnidie.

The environment is all managed by an automated system which you can set and control the intensity and colour of the spotlight, the sound and video system, cooling and heating system, ventilation system, alarm system, and the CCTV.

High End Gym For An Elegant Hotel

Year:
2014-2016

Client:
Anytime Fitness

Type:
Gym

Size:
450 m² / 4843 ft²

Location:
High Street Kensington,
London, UK

Status:
Completed

Omnide Role:
Project Management

Royal Garden Hotel in High Street Kensington was interested in launching a gym and spa that would match the level of elegance of the hotel whilst also creating an innovative and relaxed environment to let off the steam.

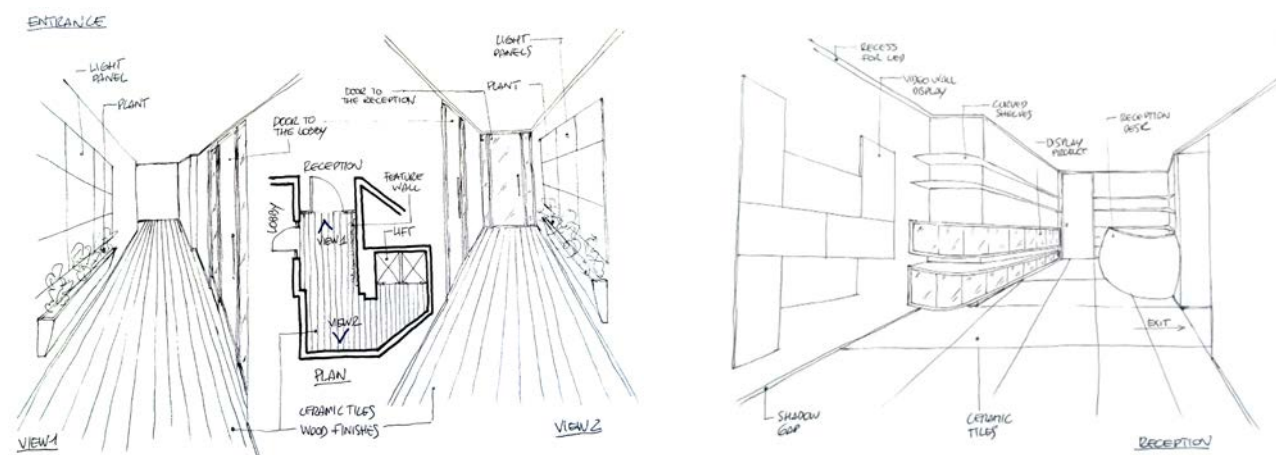

The design scheme included a new Anytime Fitness Gym, 5 therapy rooms and a wellness hub open to the public.

Finding the right balance between the creative and imaginative expectations of Royal Garden Hotel and the technical requirements of Anytime Fitness was essential to the completion of the design.

The driving concept for the design was to achieve a flexible space that could be used by hotel guests and gym members. The neighbouring Hyde Park was incorporated in the design by locating the therapy rooms in a position that would allow creating views of the park that would inspire tranquillity during therapy sessions

LANDSCAPE

Parco Teulada
Community Park Design In Rome

INTERIOR/RETAIL/OFFICE/HOSPITALITY/PRODUCT DESIGN/LANDSCAPE

Year:
2017

Client:
Private

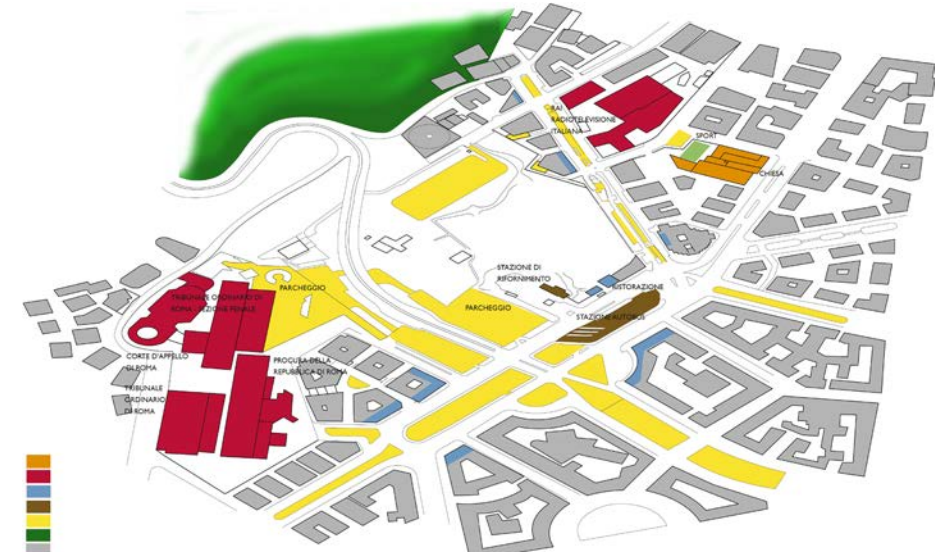

Type:
Urban Landscape

Size:
29000 m² / 312150 ft²

Location:
Via Teulada, Rome, UK

Status:
In progress

Omnide Role:
Architect

The Park Street Teulada is located in the north-west of the city, the area is characterized by a dense urban fabric and crossed by urban roads. To the north the site is surrounded by the green of MonteMario Nature Reserve with which it unites, to the south it borders with the city in close relationship with the Vatican. The surrounding area is dense and rich in infrastructure and suffers from the lack of public green spaces even though it spans from natural reserve.

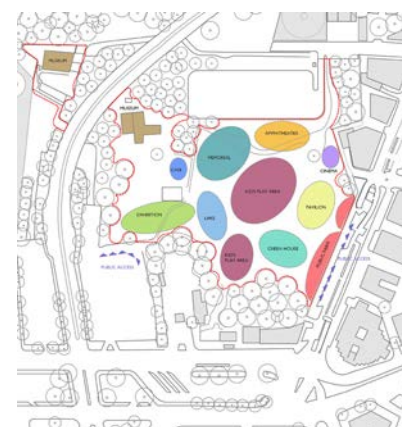

CONCEPT GENERATING PROCESS:

Phase 1 - Identify the Area

Phase 2 - Identify the functions

Phase 3 - Build the pathway around the functional areas

Phase 4 - Establish 30% as green area

Phase 5 - Build pavillions, cafe, play areas, etc.

Phase 6 - Open Public involvement for Pavillions / Research / Volunteerism / Contributions and Development

- KEY:
- 1 MAIN ENTRANCE
 - 2 PEDESTRIAN ENTRANCE
 - 3 KIDS PLAY AREA
 - 4 KIDS PLAY AREA
 - 5 EXHIBITION HALL
 - 6 LAKE
 - 7 BRIDGE
 - 8 SCULPTURE
 - 9 PLAY AREA (PING PONG)
 - 10 PUBLIC FARM
 - 11 CAFE'
 - 12 CINEMA
 - 13 EXHIBITION HALL
 - 14 KIDS PLAY AREA

PROPOSED PLAN

PROFESSIONAL PHYSICAL MODEL MAKING

Parco Teulada is a community driven open project that evolves in response to the local community's input.

The vision of OmniDe for the project is to transform it into a self-sustaining environmentally friendly park with temporary spaces such as exhibition halls and sculpture areas that are designed to be constantly evolving in response to the community's needs as well as being self-sufficient in energy.

Although the site is located next to a natural reserve, the surrounding area features dense and rich infrastructure which lacks in public green spaces. The park will act as an extension to the nearby natural reserve and promote an area where the locals can connect with the natural environment, as well as creating a strong point of interest to invite people from all over the city.
